The accompanying notes are an integral part of these condensed consolidate interim financial statements

1. NATURE OF OPERATIONS AND GOING CONCERN

Desert Gold Ventures Inc. (the "Company") is an exploration stage company and is engaged in the acquisition, exploration and development of mineral resource properties. The principal business of the Company is conducting mineral property exploration in Mali and Rwanda. The Company's shares are traded on the TSX Venture Exchange (the "TSX-V") under the symbol DAU.

The head office and principal address is located at 9648-128th Street, Suite 210, Surrey, BC, V3T 2X9.

These condensed consolidated interim financial statements are prepared on a going concern basis, which assumes that the Company will be able to meet its obligations and continue its operations for its next fiscal year. Realization values may be substantially different from the carrying values shown and these consolidated financial statements do not include adjustments that would be necessary if the going concern assumption is not appropriate.

The Company had an accumulated deficit of $52,558,031 at March 31, 2022 and did not have revenue since inception. These factors indicate the existence of a material uncertainty that may cast significant doubt about the Company's ability to continue as a going concern. The Company's continuing operations and its ability to meet mineral property and other commitments are dependent upon the ability of the Company to continue to raise additional equity or debt financing and/or to seek joint venture partners. Although the Company has been successful at raising capital in the past, there is no assurance that the Company will be able to raise adequate financing on terms that are acceptable to the Company, if at all. Based on its current plans, budgeted expenditures, and cash requirements, management believes the Company would need to raise additional capital to accomplish its business objectives thereafter.

At the time these consolidated financial statements were prepared, the COVID-19 pandemic has caused significant disruptions to the global economy and increased volatility in the global financial markets. The extent to which COVID-19 may adversely impact the Company's business and financing opportunities and access to mineral properties to conduct exploration activities will depend on future developments such as the geographic spread of the disease, the duration of the outbreak, travel restrictions and social distancing at the properties, business closures or business disruptions, and the effectiveness of actions taken in Canada, and other countries to contain and treat the disease.

Adoption of new accounting policies

The Company has not adopted new accounting policies since its recent year ended December 31, 2021.

Significant estimates and judgements

Significant Estimates
Estimates and assumptions where there is significant risk of material adjustments to assets and liabilities in future accounting periods include:

Recoverability and measurement of deferred tax assets
In assessing the probability of realizing deferred tax assets, management makes estimates related to the expectation of future taxable income, applicable tax opportunities, expected timing of reversals of existing temporary differences and the likelihood that the tax position taken will be sustained upon examination by applicable tax authorities. In making its assessments, management gives additional weight to positive and negative evidence that can be objectively verified.

Assumptions used to assess share-based compensation
In assessing the fair value of stock options granted and vested, the Company applies Black-Scholes Option pricing model. Option pricing models require the input of subjective assumptions including expected price volatility, interest rate, and forfeiture rate. Changes in the input assumptions can materially affect the fair value estimate and the Company’s earnings and equity reserves.

Provision
A provision is recognized if, as a result of a past event, the Company has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability. The unwinding of the discount is recognized as a finance cost. The Company has not recorded any provisions for any of the financial years presented.

(Unaudited - Expressed in US dollars)

2. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Significant Judgements
The most significant judgments in applying the Company's accounting policies in these consolidated financial statements are:

Title to Mineral Property Interests
Although the Company has taken steps to verify title to mineral properties in which it has an interest, these procedures do not guarantee the Company's title. Such properties may be subject to prior agreements or transfer and title may be affected by undetected defects. Such properties may be subject to prior agreements or transfer and title may be affected by undetected defects.

Other significant judgments in applying the Company's accounting policies relate to the assessment of the Company's ability to continue as a going concern (Note 1) and the classification of its financial instruments.

5. EXPLORATION AND EVALUATION PROPERTIES

Risk management
The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework. The Company's risk management policies are established to identify and analyze the risks faced by the Company to set appropriate risk limits and controls and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and the Company's activities. The Company has exposure to the following risks from its use of financial instruments:

Liquidity risk
Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company's approach to managing liquidity risk is to ensure as far as possible that it will always have sufficient cash on demand to meet its liabilities when they fall due under both normal and stressed conditions without incurring unacceptable losses or risking damage to the Company's reputation.

Historically, the Company's primary source of funding has been the issuance of equity securities for cash, primarily through private placements and loans from related and other parties. The Company's access to financing is always uncertain. There can be no assurance of continued access to significant equity funding. The Company is subject to liquidity risk.

Interest rate risk
As at March 31, 2022, the Company did not have any significant exposure to the risk of changes in market interest rates as the Company did not have any financial instruments that are exposed to changes in interest rates.

Credit risk
Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations and arises principally from the Company's receivables from optionees and investment securities

The potential concentration of credit risk consists mainly of cash and other receivables. The Company limits its counterparty exposures from its cash by only dealing with well-established financial institutions of a high quality credit standing. Receivables comprise mainly subscription receivable, receivable from optionee, and GST receivable from the government. The maximum exposure to credit risk is represented by the carrying amount of each financial asset on the statement of financial position.

At the reporting date the majority of the Company's cash resources were deposited with reputable established financial institutions. As a result, management believes the Company is not exposed to significant credit risk due to the credit worthiness of these counterparties.

Foreign currency risk
Foreign currency risk arises from holdings of financial assets and liabilities in currencies other than the function currency to which they relate. The Company and its subsidiaries have minimal such holdings, consequently foreign currency risk is considered low.
